LONDON W.I

MESSRS. W. J. JEFFERY & CO. LTD.,

9, GOLDEN SQUARE, REGENT STREET, W.I.

When a Gun is required to special dimensions, either an old Gun should be sent or else a correct measurement given, directions for taking which will be found below.

DIRECTIONS FOR MEASUREMENT

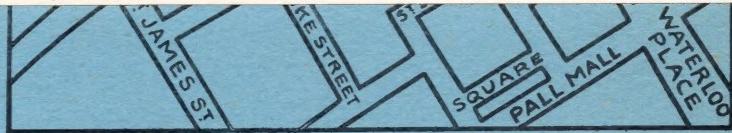

Take a perfectly straight piece of wood about the length of the gun, and a quarter of an inch thick, place it on edge along the groove of the rib, and secure it by tying it to the barrels, leaving one end to project to the full length of the stock; then lay the gun on its side upon a table, cock the hammer of the right-hand lock, and take the following dimensions accurately, writing the particulars against each measurement specified:

	Inches	16ths
Height from A to B.....		
" " C , D		
Length from centre of right-hand trigger at E to point F.....		
" " " " E , G		
" " " " E , H		

The stocks of guns made for right-handed shots are usually set off slightly to the right (about $\frac{1}{4}$ in.). This is called cast off and brings the barrels up in alignment with the eye. For a sportsman who shoots from the left shoulder the stock is set to the left. This is called cast on. In case of any uncertainty, full details of prospective purchasers, height, build, and methods of shooting should be given us.

N.B.—This Diagram, with Details filled in, should be sent with the Order

weapons down to the lowest possible limit consistent with sound workmanship. We can confidently invite a comparison of our prices with any other firm doing the same class of business, feeling sure that this comparison will result in our favour.

The weapons we have in stock and in process are finished with stocks of a dimension that should suit the average sportsman, and in case of need they can be specially built to order without extra cost unless some major alteration to the standard specification is called for.

ALL PRICES ARE SUBJECT TO ALTERATION WITHOUT NOTICE

In view of the fluctuations in the cost of material and labour, and in view of any possible alteration to the Purchase Tax we have had to issue an unpriced Catalogue; a separate price sheet is enclosed with the Catalogue giving latest prices.

PURCHASE TAX applies to New Shot Guns, Air Rifles and Pistols, ammunition for same, accessories, gun cases and covers, and also to the fitting of new barrels to shot guns, when supplied for the Home Market.

Purchase Tax does not apply to Rifles or ammunition, or to secondhand weapons. Goods selected in England by customers proceeding abroad can be taken out of the country as baggage under The Personal Export Scheme, and Tax avoided.

INTRODUCTION

A WELL-MADE Gun or Rifle will last for many years, so the selection of one of these should be made with very great care. We are only too pleased to advise sportsmen in the selection of a suitable weapon.

Our business has now been established for over half a century, and has been built up by recommendations from one satisfied customer to another, and no effort is spared to make our goods of outstanding value.

Our Showrooms are now at 9, Golden Square, Regent Street, W.1., within a minute's walk from Piccadilly Circus.

Sportsmen will be able to inspect at their leisure, at the above address, one of the largest and most varied selections of New and Second-hand Weapons in the World.

The excellence of our Guns and Rifles is known all over the world, and we claim that for accuracy, soundness of workmanship, durability and style of finish, goods of our manufacture are unequalled. We make every effort to keep the price of our weapons down to the lowest possible limit consistent with sound workmanship. We can confidently invite a comparison of our prices with any other firm doing the same class of business, feeling sure that this comparison will result in our favour.

The weapons we have in stock and in process are finished with stocks of a dimension that should suit the average sportsman, and in case of need they can be specially built to order without extra cost unless some major alteration to the standard specification is called for.

JEFFERY'S SHOWROOMS (Close to Piccadilly Circus)

JEFFERY'S

SIDE LOCK EJECTOR GUN

We are, in view of the shortage of material and labour, concentrating on the production of our well known Anson & Deeley action type of ejector guns.

We shall, in due course, be able to undertake the building of Side Lock Ejector guns and enquiries are welcomed.

SMALL BORE GUNS

At the time of the publication of this list, barrel blanks

20 BORE and 16 BORE Barrel Blanks are now in the course of manufacture, and orders for our Models 1, 2, & 3 guns in the above bores can now be accepted.

JEFFERY'S

SIDE LOCK EJECTOR GUN

We are, in view of the shortage of material and labour, concentrating on the production of our well known Anson & Deeley action type of ejector guns.

We shall, in due course, be able to undertake the building of Side Lock Ejector guns and enquiries are welcomed.

SMALL BORE GUNS

At the time of the publication of this list, barrel blanks are only obtained in 12 bore, consequently we are unable to offer the smaller bore guns, such as 28, 20 and 16 bore, this also applies to the larger bores such as 8 bore, a certain amount of 410 bore Single barrel guns are available.

J E F F E R Y ' S

No. I MODEL

EJECTOR GUN

12 bore, Anson & Deeley Action. The barrels, which are bored from solid 'Blanks' — not made from ordinary Drawn Tubes — can be either 25", 26" or 28" (30" barrels can also be supplied for special orders, but at present this length may cause some delay in delivery) unless otherwise ordered the right barrel is bored Improved Cylinder and the left barrel is well Choked. The Action, which is specially shaped and filed, is well polished and handsomely engraved. The Stocks are from carefully selected walnut, very special attention is given to balance and to the regulating of the mechanism. Average weight with 28" barrels is $6\frac{1}{2}$ lbs. With shorter barrel this weight can of course be reduced, but we do not advise a weight of less than $6\frac{1}{4}$ lbs.

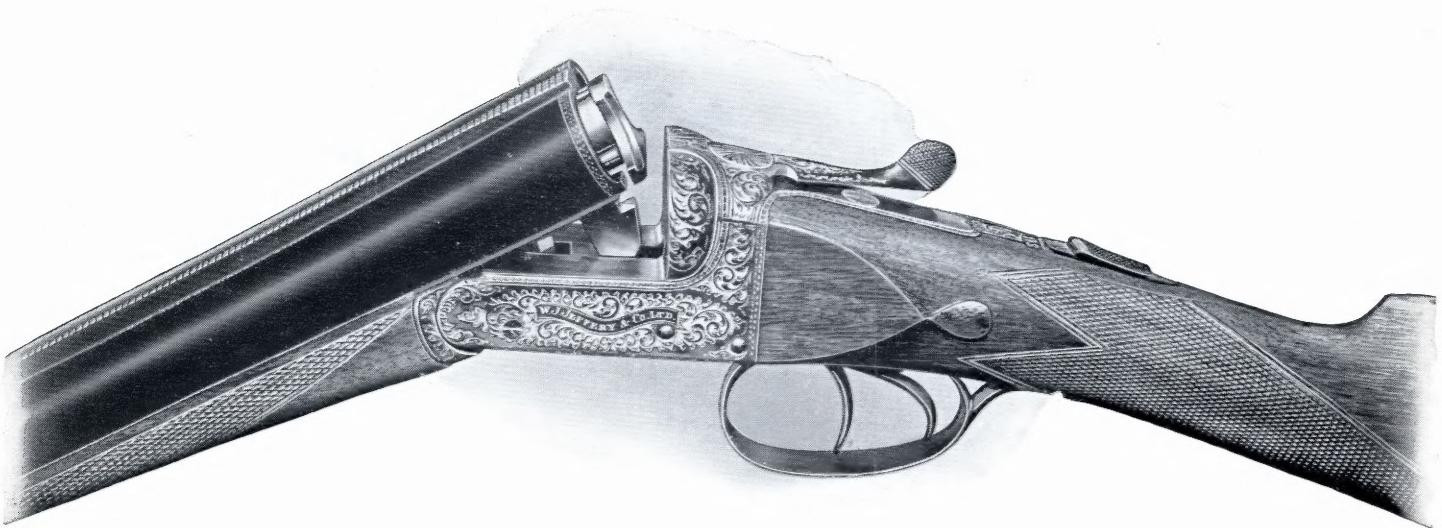

This particular model is a really well made gun and undoubtedly the best of its class available to-day.

The above gun can be specially built to order to handle the 12 bore $2\frac{3}{4}$ " case cartridge, barrels 28" or 30", both well choked unless otherwise required, the action is specially designed to stand the extra pressure and the barrels are fitted with an extended rib. Weight approximately 7 lbs. It can also be built for the 3" case ; details on application.

JEFFERY'S

No. 2 MODEL

EJECTOR GUN

A very well finished 12-bore ejector gun. Anson & Deeley Action. The Action, though not shaped like that of our No. 1 Model, is well filed, polished and engraved. The stock is of selected Walnut. The barrels are of high grade English steel bored from solid blanks, lengths and boring as for Model 1 guns. The usual attention we give to balance is evidenced in this gun, which is a really well balanced one. Altogether this is a very attractive gun at a reasonable price. Weight as for Model 1.

The above gun can be specially built to order to handle the 12 bore $2\frac{3}{4}$ " case cartridge, barrels, 28" or 30", both well choked unless otherwise required, the action is specially designed to stand the extra pressure and barrels are fitted with an extended rib. Weight approximately 7 lbs. It can also be built for the 3" case ; details on application.

JEFFERY'S

No. 3 MODEL EJECTOR GUN

This is a 12 bore Anson & Deeley Ejector gun of plain finish but of sound construction, nicely finished with a small amount of engraving, barrels of good English steel bored from solid blanks and 28" or 30" in length, left choke, right improved cylinder, chambered for 2½" case only. Weight 6½ to 6¾ lbs.

Model 3 Hammerless Ejector gun, finished as above but with a heavier action and barrels of 28" or 30" chambered for the 2¾" case, top extension with bite. Half pistol grip stock. Weight about 7¼ lbs.

Model 3 Hammerless Ejector gun, as above, but for the 3" case. Weight about 8 lbs.

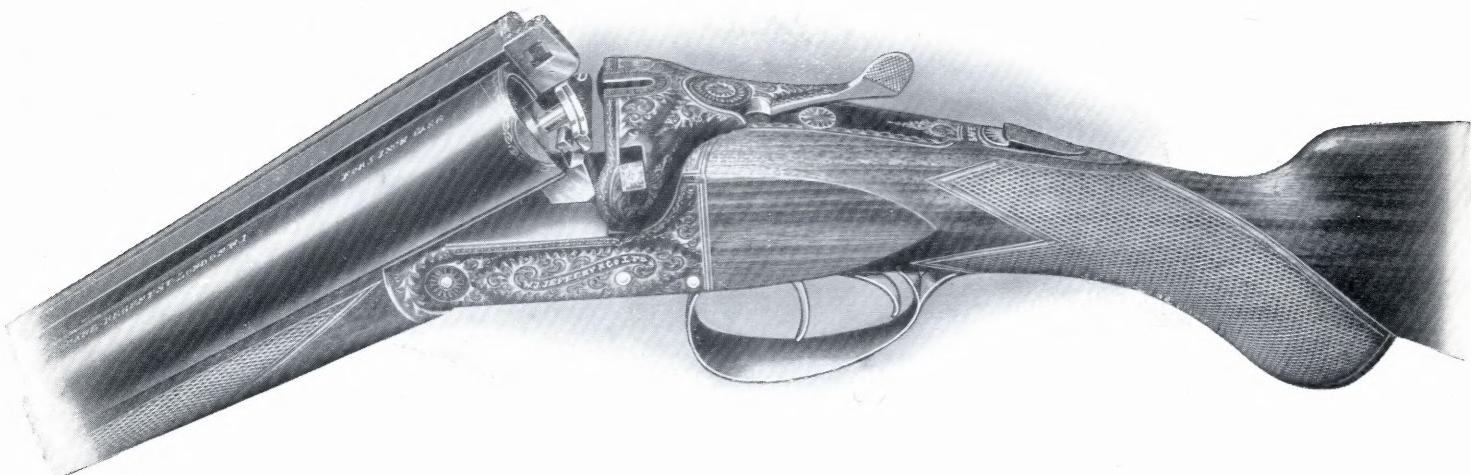

Model 3 Hammerless Non-ejector gun, 28" or 30" barrels, chambered for the 2½" case. Weight 6½ to 6¾ lbs.

Model 3 Hammerless Non-ejector gun, as above, 30" barrels, for the 2¾" case, extended rib with bite, Anson forepart, left choke, half pistol grip stock. Weight about 7 lbs.

JEFFERY'S

SPECIAL

PIGEON AND WILDFOWL GUN

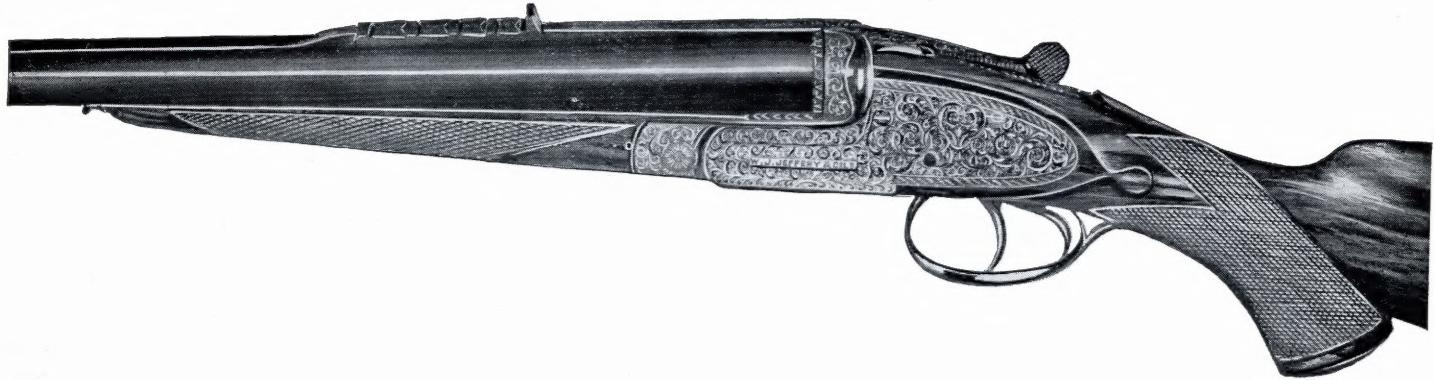

12 bore, top lever, Anson & Deeley Action, Hammerless non-ejector, 30" choke barrels, chambered for the 3" case, square cross-bolt extension, side clips on action, flat file cut rib, Anson forepart, half pistol grip stock, automatic safety. Nicely finished, but in view of the present shortage of engravers we have not been able to have the gun engraved as highly as the illustration. This is a strong, sound gun, made specially heavy at the breech to withstand heavy charges of powder and shot ; the weight is about 8 lbs. At present only 30" barrels are available, but we hope eventually to be able to provide 32" barrels if called for ; we would, however, point out that there is little advantage in having barrels over 30" in length when the modern smokeless powders are used.

FOURTEEN BORE SINGLE BARREL GUNS

We can offer a well made single barrel 410 bore gun of English manufacture, this is a side lever hammer weapon of the folding type, 24" barrel chambered for the various lengths of 410 bore cartridges, it is reliable, light, handy and convenient to pack.

JEFFERY'S

DOUBLE CORDITE RIFLES

We very much regret we are as yet unable to restart the manufacture of our well known double cordite rifles, at the moment we are concentrating on the manufacture of Magazine Rifles, details of which are given on the following pages.

The following table of ballistics of some of the more popular rifle cartridges will, we think, be of interest to sportsmen.

Comparisons of Different Velocities and Striking Forces

(These figures refer in the majority of cases to English Ammunition).

Cartridge	Weight of Bullet in Grains	Muzzle Velocity in Feet per Second	Muzzle Energy in Foot Pounds	Velocity at 100 Yds. Feet per Second	Energy at 100 Yds. Foot Pounds

NOTE.—Practically all the above ballistics are taken from Rifles with 28in. barrels.

JEFFERY'S

MAGAZINE RIFLES

The production of these rifles during the past few years has been badly hung up by the difficulty in obtaining the necessary material, including MAUSER ACTIONS, and in place of the Mauser we have been experimenting with another type of Magazine Action which is equally as strong as the Mauser and has a side safety very conveniently placed ; this action has proved most satisfactory for use with our well known .404 bore cartridges and also with the .375 bore Magnum Cartridges, so much so that the majority of these bores will be made with this type of action.

For those sportsmen who prefer Mauser Actions we have a small quantity of New F N Mauser Actions ; these can be made up into best quality rifles for our .333 and .404 bore cartridges, also for the .375 bore Magnum cartridges. These rifles will be built to order and prices will be approximately the same as that charged for our Model 1 magazine rifles.

We also have a small supply of Military Mauser Actions, which we propose using for our Model 3 rifles ; details of these rifles will be found on page 10.

**On the following page will be seen some notes on
the various cartridges for which we make rifles.**

JEFFERY'S

MAGAZINE RIFLE CARTRIDGES

For deer stalking in Scotland or for similar types of shooting the .275 (7mm.) bore cartridges are very suitable ; two loads are available, one with the 140 grain copper pointed bullet having a muzzle velocity of 2900 feet per second, and the old original cartridge with 173 grain bullet, which is still a good killing cartridge.

The .30 bore Springfield Model 1906 cartridge is one of the most popular cartridges ever introduced and is the U.S.A. Military Cartridges that has been developed for sporting purposes ; various loads are obtainable, the most popular probably being the 150 grain and 180 grain bullet loads velocity with the 180 grain load is about 2700 feet per second.

The Jeffery .333 bore cartridge is one of the most powerful medium bore cartridges available, this fires a long heavy bullet at a medium velocity ; owing to the great sectional density of the bullet, the velocity is well maintained and the 300 grain bullet has plenty of weight to carry it on after expansion has taken place.

The .375 bore Magnum belted rimless cartridges designed by Messrs. Holland & Holland is a very powerful cartridge, and owing to the various weights of bullets obtainable, is one of the rifles that can be used for almost any type of game ; in addition to the 270 and 300 grain bullet loads a higher velocity load with a 235 grain bullet is obtainable, but for all round work we prefer the heavier bullets.

The Jeffery .404 bore cartridge is almost too well known to write about. This was one of the first large bore magazine rifles introduced, and it is very questionable if any rifle has been more popular ; the chief testimonial to this cartridge is the number of firms who have made and are making rifles to take the cartridge. The bullet is a heavy one which travels at a medium velocity and delivers a heavy striking blow ; the cartridge shoots well and does not give a high chamber pressure.

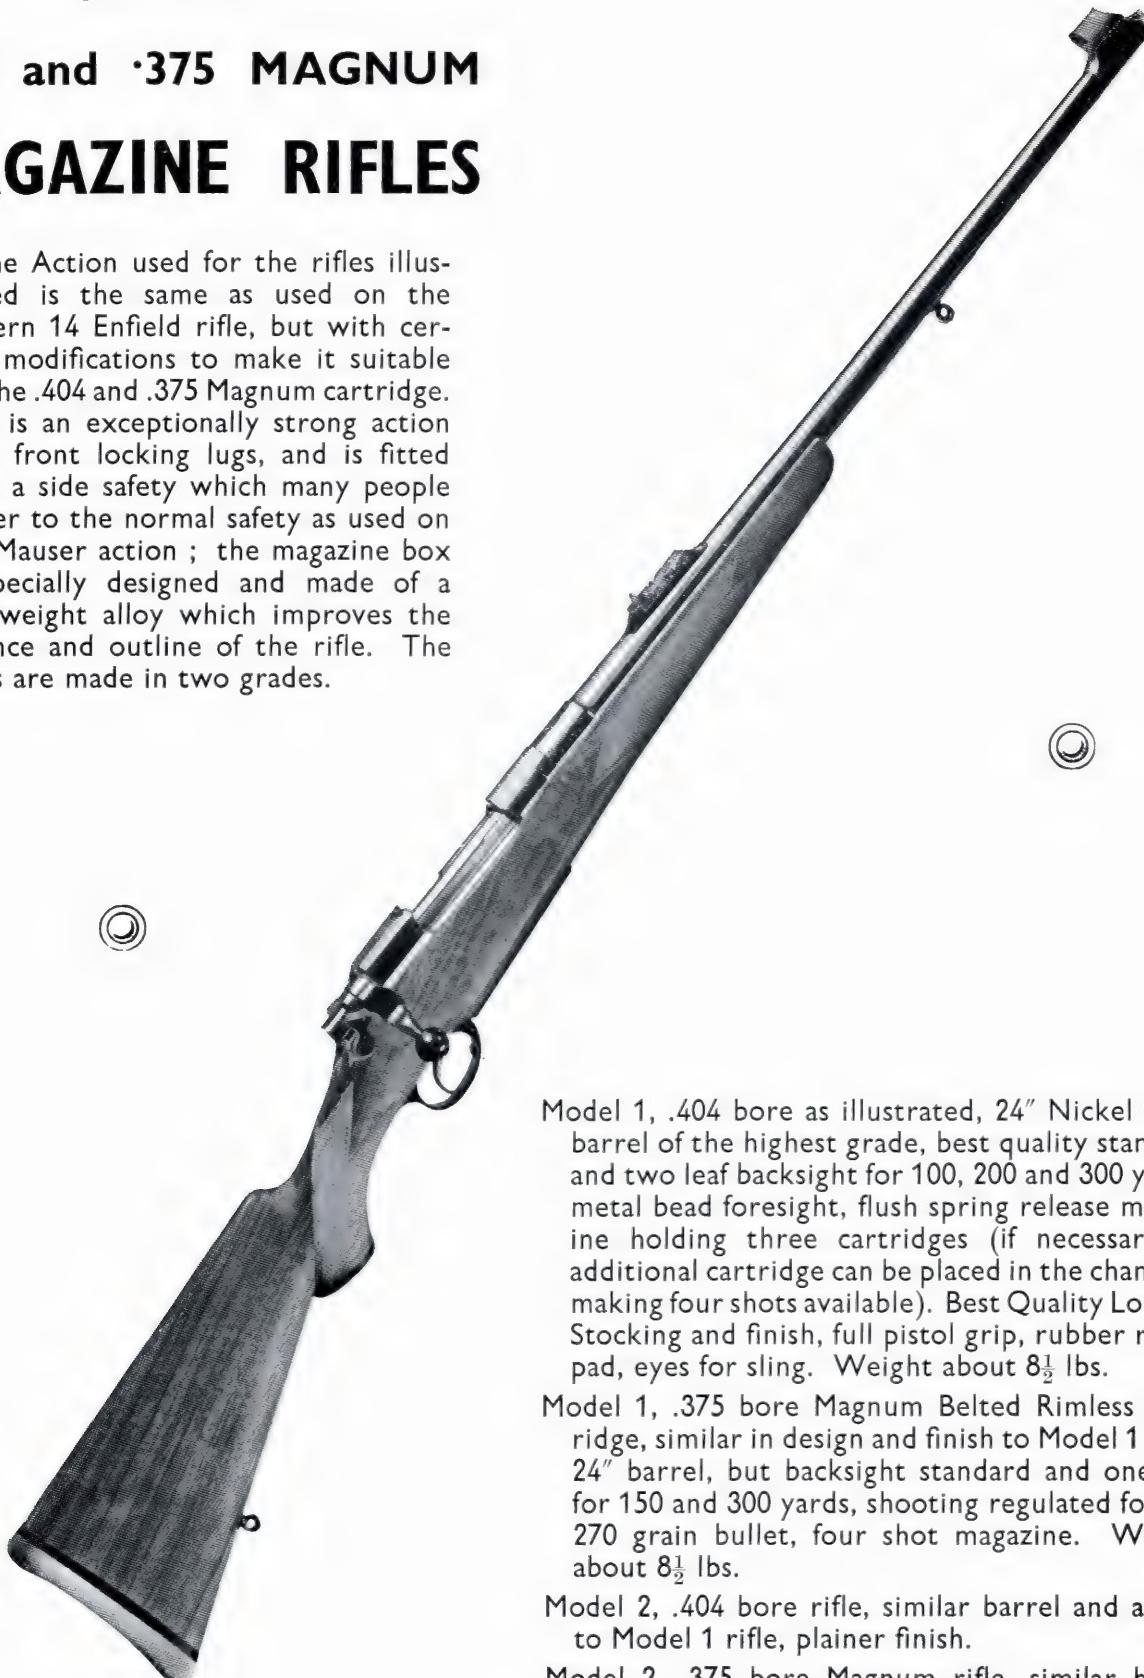

JEFFERY'S

·404 and ·375 MAGNUM

MAGAZINE RIFLES

The Action used for the rifles illustrated is the same as used on the Pattern 14 Enfield rifle, but with certain modifications to make it suitable for the .404 and .375 Magnum cartridge. This is an exceptionally strong action with front locking lugs, and is fitted with a side safety which many people prefer to the normal safety as used on the Mauser action ; the magazine box is specially designed and made of a lightweight alloy which improves the balance and outline of the rifle. The rifles are made in two grades.

Model 1, .404 bore as illustrated, 24" Nickel Steel barrel of the highest grade, best quality standard and two leaf backsight for 100, 200 and 300 yards, metal bead foresight, flush spring release magazine holding three cartridges (if necessary an additional cartridge can be placed in the chamber, making four shots available). Best Quality London Stocking and finish, full pistol grip, rubber recoil pad, eyes for sling. Weight about $8\frac{1}{2}$ lbs.

Model 1, .375 bore Magnum Belted Rimless cartridge, similar in design and finish to Model 1 .404, 24" barrel, but backsight standard and one leaf for 150 and 300 yards, shooting regulated for the 270 grain bullet, four shot magazine. Weight about $8\frac{1}{2}$ lbs.

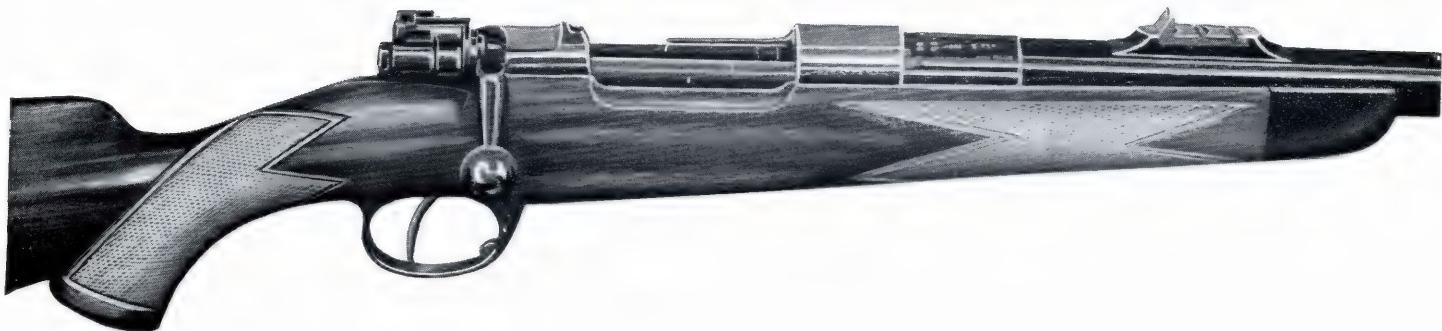

Model 2, .404 bore rifle, similar barrel and action to Model 1 rifle, plainer finish.

Model 2, .375 bore Magnum rifle, similar barrel and action to Model 1 rifle, plainer finish.

JEFFERY'S

No. 3 MODEL

MAGAZINE RIFLES

No. 3 Model .333 bore Jeffery, Mauser Action specially adapted for the Jeffery cartridge, flush magazine holding three cartridges and admitting of the bolt being closed on one cartridge in the chamber, thus enabling four cartridges to be fired without recharging, 24" nickel steel barrel, standard and two leaf backsight to 300 yards, bead foresight, shooting guaranteed, pistol grip stock with recoil pad, short chequered forepart, eyes for sling. Weight about 8 lbs.

No. 3 Model .275 (7 mm.) bore Mauser Action lightweight rifle, 24" barrel standard and two leaf backsight, sighted either for the standard cartridge with 173 grain blunt nosed bullet or for the high velocity 140 grain pointed bullet, five shot magazine, full pistol grip stock, eyes for sling. Weight about 7 lbs.

PEEP SIGHTS

Various types can be supplied and prices will be given on application. We can thoroughly recommend the Sporttarget type, which has the advantage of a lateral adjustment in addition to the normal adjustments for elevation.

TELESCOPIC SIGHTS

The selection of telescopic sights available is very limited as compared with pre-war days and we find it impossible at the present time to issue a detailed list of these sights.

JEFFERY'S

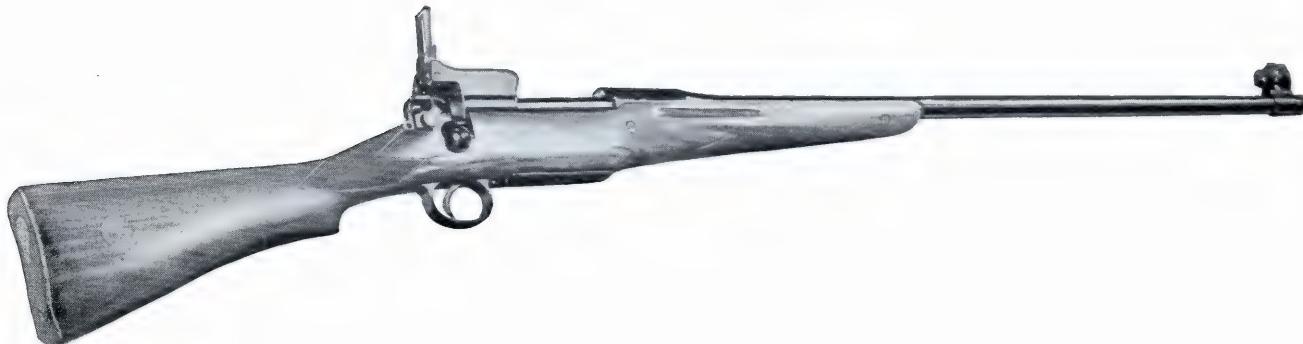

SPECIAL ·30 – 06 BORE RIFLES

Amongst the number of P 17 Enfield Military Rifles we obtained for the purpose of using the action in connection with the building up of our .404 and .375 Magnum Rifles were some with exceptionally good .30–06 barrels, a few of these actions and barrels have been reserved and have been restocked and finished in best style and they are, in effect, equal in quality and finish to our best rifles ; barrels 24" or 26", best quality standard and spring leaf backsight to 300 yards, full pistol grip stock, rubber recoil pad, eyes for sling. Weight about $8\frac{1}{4}$ lbs.

SPORTING RIFLES

·303 BORE

For sportsmen wanting a really cheap and efficient rifle, we can offer a small quantity of .303 bore Military P 14 rifles, the woodwork has been cut down as per above illustration, barrels 26", sighting is the original Military Peep Sight on the bridge of action and original foresight, wood-work has been polished and rechequered, metalwork reblacked and the weapons are to all intents and purposes as new. Weight $8\frac{1}{2}$ lbs. Sighting is for the Mark VII cartridge.

B.S.A. AIR RIFLES

CADET

This is a light, easy to handle junior Air Rifle which is sufficiently powerful to kill rats, squirrels and other vermin up to 30 yards range. As a safety measure to prevent accidental discharge, the trigger pull is heavier than is usually found in rifles designed for more mature sportsmen.

Length of barrel 15 ins. Overall length 42 ins. Sight base 12½ ins. Weight approximately 5½ lbs.

CADET MAJOR

Larger and more powerful than the Cadet, this model is fitted with an adjustable rear sight and a single screw attachment for setting the trigger pull to suit individual requirements.

Length of barrel 18½ ins. Overall length 42 ins. Sight base 16 ins. Weight approximately 5½ lbs.

B.S.A. .177 CLUB

This Air Rifle has been produced for close-range target shooting, but it will prove equally suitable for the destruction of pests up to 50 yards.

The cocking lever is completely concealed within the fore-end. This new arrangement successfully overcomes the tendency of former types of "under lever" rifles to be muzzle heavy and, therefore, ensures the perfect balance essential for accurate shooting.

Length of barrel 20 ins. Overall length 44 ins. Sight base 16½ ins. Weight approximately 7½ lbs.

These models are designed to shoot inexpensive "PYLARM" PELLETS

B.S.A. GUNS LTD.

BIRMINGHAM 11

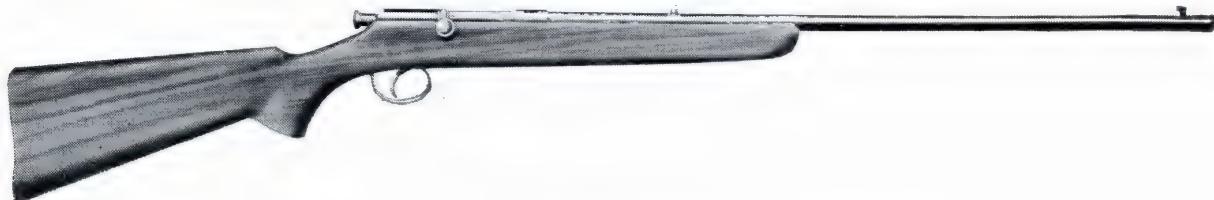

ENGLAND

B.S.A. ·22 BORE RIFLES

RALOCK

The B.S.A. Ralock .22 Self-loading Rifle has a number of outstanding features that will be readily appreciated. The action is of entirely new conception, the breech block having a swinging or radial movement. Loading is effected through the side of the butt, the cartridges being fed into the action by a spring-loaded magazine which is withdrawn beyond the opening for this purpose. After the rounds have been inserted and the magazine closed, the gun is cocked by operating the cocking lever. Each round may now be fired by repeated pressure on the trigger only. Empty cases are released by operating the cocking lever which allows them to fall freely from the rifle and eliminates the usual violent side or bottom ejection of hot and dirty cases. Barrel 22 ins. long, chambered for .22 (short or long cartridge) whichever applies, only. The stock has a pistol grip and fore-end is of semi-beavertail design. Rear sight is adjustable and with bead foresight gives a sight base of 18 ins. Overall length is 38 $\frac{3}{4}$ ins. Weight is approximately 6 lbs.

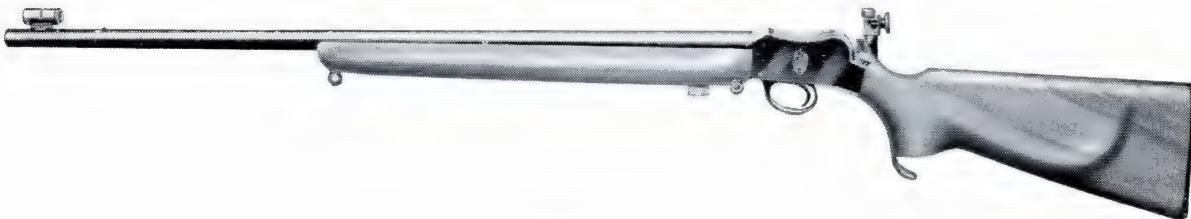

SPORTSMAN

A single shot long bolt-action Rifle of highest quality workmanship and dependable action. The simple bolt action is smooth and efficient in operation, whilst an improved cartridge support ensures a clean straight-line feed. Weight approximately 5 $\frac{1}{2}$ lbs.

SPORTSMAN FIVE. This model is similar in design to the Sportsman but has a detachable box magazine holding five long rifle cartridges. The magazine is easily withdrawn by pressing the thumb catch. Weight approximately 5 $\frac{1}{2}$ lbs.

SPORTSMAN TEN. Similar to the others, this model has in addition a tubular magazine with a capacity of ten long rifle cartridges. The feed mechanism is completely new and has been designed to ensure trouble-free operation. Weight approximately 5 $\frac{1}{4}$ lbs.

MARTINI

The B.S.A. Martini target Rifle needs no introduction. Designed to meet the popular demand of the marksman, this rifle combines the features of the B.S.A. No. 12 and 15 models so well known in pre-war days.

Action. Martini pattern giving comfortable operation, short smooth crisp trigger-pull, together with short and fast firing pin travel.

Barrel. Heavy 29 in. semi-floating barrel, bored and rifled to the highest B.S.A. standard of accuracy.

Sights. Parker-Hale precision rearsight No. P.H.7 and Parker-Hale foresight No. F.S.2.2 tunnel type. Overall length 44 $\frac{3}{4}$ ins. Weight approximately 9 lbs.

WEBLEY & SCOTT'S SPECIALITIES

MARK 4 REVOLVER

The Police model in calibre .32 and .38 is supplied with solid fixed rounded foresight and square notch rear sight, 4" barrel unless otherwise ordered.

The Mark 4 .22 Target Revolver has a 6" barrel and adjustable sights.

Made in calibre .22, .32 and .38, 3", 4" or 5" barrel.

AIR PISTOLS

Calibre .177 or .22

3 Models—

Senior, Mark I, Junior

The "Webley" Air Pistols are designed on scientific lines, machined on the interchangeable system, and spare parts can be obtained at little expense.

Extraordinary accuracy can be obtained with these pistols, and they will appeal to all classes of buyers both for individual practice and for friendly rivalry in competitions.

JUNIOR

Weight of Pistol, 24 ozs.

Length overall, 7 $\frac{3}{4}$ in.

Length of barrel, 60 in.

Smooth bore.

MARK I and SENIOR

Weight, 33 ozs.

Length overall, 8 $\frac{1}{4}$ in.

Length of Barrel, 6 $\frac{1}{4}$ in.

Machine Cut Rifling.

MARK 3 AIR RIFLE

Calibre .177 or .22

SPORTS AND TARGET MODEL

Strength in construction. Simplicity in action.

Specification :

Superior finish throughout.

Weight of Rifle, approx. 6 lbs. 13 ozs.

Length overall, 43 $\frac{1}{4}$ in.

Barrel length, 18 $\frac{1}{4}$ in.

Distance between sights, 17 in.

Wheel Adjustable Sight U.

Blade foresight.

Fixed barrel. Machine cut rifling.

Under lever loading.

Stock and forepart in one piece of well seasoned Walnut.

Standard model—straight cording and ribbed butt.

Trigger pull with extremely smooth action.

Weight of pull-off, 2 $\frac{3}{4}$ lbs.

The WEBLEY Double Hammerless Gun

EJECTOR

Fig. 700

The design retains all the features of the Anson and Deeley system which has stood the test of time for reliability. Well balanced with graceful outline, each gun receives individual attention by the most highly skilled craftsmen making them comparable with guns of the highest grade. Built throughout in the Webley & Scott factory.

This model can be confidently recommended to sportsmen requiring a hard hitting gun of sound construction at a moderate price.

Barrels	12 bore, 28 in. and 30 in., special steel, left choke, right improved cylinder. $2\frac{1}{2}$ in. or $2\frac{3}{4}$ in. chambers. Nitro proved.
Action	Box lock, hammerless, top lever, non-extension, solid tumblers, automatic Safety.
Stock	Selected well seasoned Walnut, straight or half pistol hand.
Fore-end	Push down rod "Anson" type.
Finish	Superior finish throughout, chequered on hand and fore-end.
Engraving	Approximately as illustrated, or more ornate if required.
Weight	12-bore, 28 in. barrel, approximately 6 lbs. 6 ozs.

The WEBLEY Single Barrel Semi-Hammerless Ejector Gun

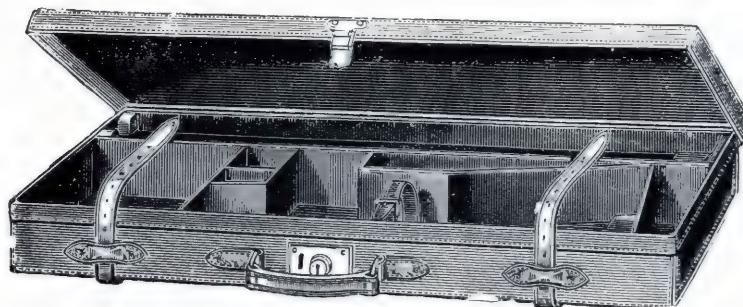

Fig. 100

The Webley single barrel gun needs no introduction ; thousands are in the hands of satisfied users in all parts of the world. It is a thoroughly sound and reliable general purpose gun, strongly built to withstand hard wear, with long range and hard hitting power.

The action has Webley's patent ejector mechanism and V. mainspring.

Barrel	12 bore, 30 in. or 32 in., special steel, full choke, $2\frac{3}{4}$ in. chamber. 3 in. chamber to order at extra cost.
Action	Semi-hammerless, top lever, ejector.
Stock	Well seasoned Walnut, half pistol hand.
Fore-end	Bolt Snap.
Finish	Well finished throughout. Chequered stock and fore-end on De Luxe model only.
Engraving	The standard gun is not engraved, but can be engraved at extra cost, if required.
Weight	12-bore, 30 in. barrel, approximately 6 lbs. 8 ozs.

GUN AND RIFLE CASES

- No. 1 Brown or green canvas, box pattern, leather bound,
straps all round, spring lock.
No. 2 Best quality green or brown canvas as above.
No. 3 Plain quality leather case.
No. 4 Superior quality leather case.
No. 5 Brown or green canvas lightweight case with rounded corners.
No. 6 Superior quality do. do.
No. 7 Plain quality leather do.
No. 8 Superior quality leather do.
No. 9 Leather Leg of Mutton case.
No. 10 Superior quality do.
No. 11 Full length canvas rifle case.
No. 12 Superior quality do.
Brass corners can be fitted at an extra charge.

CARTRIDGE BAGS

- No. 1 Best quality Pigskin, 50 size, 75 size, 100 size
No. 2 Cowhide do. do. do.
No. 3 Best Canvas do. do. do.
No. 4 Plain Canvas do. do. do.

CARTRIDGE BELTS

- No. 1 Best Cowhide with open end tubes, all bores.
No. 2 Best Cowhide with closed end tubes, do.
No. 3 Best Cowhide with spring clips, 12 bore only.

GUNS AND RIFLE COVERS, full length

- No. 1 Brown Canvas, leather cap at nose.
No. 2 Superior quality do.
No. 3 Superior quality for rifles with action patch and D's for sling.

SLINGS

- No. 1 Stout Web with swivel or strap ends.
No. 2 Best Hide do. do.
No. 3 Rawhide with lace ends.

GAME CARRIERS

- No. 1 Hide with 12 hangers to hook on belt.
No. 2 do. do. for carrying by hand.

GAME BAGS

In various patterns and sizes.

GUN AND RIFLE CLEANING

More weapons are ruined by faulty cleaning than by any other means ; the essential thing to do is to use plenty of oil and see that all fouling or residue is removed ; the barrel should then be dried out with clean patches or tow, carefully inspected and if perfectly clean it should be well oiled. It is of little use to use dirty patches or tow for finally oiling as the chances are that a considerable amount of fouling will be placed back into the barrels ; a bronze wire brush is useful for breaking up the fouling. It should be realised that the majority of oils only keep the moisture in the air from rusting the barrels, they do not counteract the fouling left by the cap of the cartridge. The ordinary Rangoon Oil is quite suitable for smooth bore guns provided that all fouling has been removed before finally oiling, but for rifles we strongly advise the use of Young's .303 cleaner ; it is an alkaline compound with great acid and rust-resisting properties. It absorbs moisture instead of retreating from it and when the moisture has co-operated it thickens to a grease which preserves the barrel from rust in any but the dampest climates, for an indefinite period ; this oil is also very suitable for shotguns.

We have not sufficient space in this Catalogue to give full details of all the various types of cleaning accessories and shall be pleased to quote specially for any accessories not listed ; the majority of cleaning fittings shown are of the well known Parker-Hale make.

CLEANING IMPLEMENTS FOR SHOT GUNS

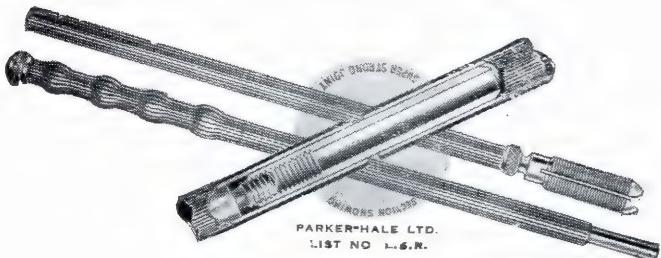

STANDARD CLEANING OUTFIT

Neat, substantial, card box suitably divided into compartments and containing :

Two-piece jointed wood cleaning rod, flexible brass jag, "double twist" bristle and phosphor bronze brushes, packet of flannelette patches, and Young's ".303" Cleaner in "Valvespout" container—the "Valvespout" is absolutely leakproof ; a half turn of the nozzle opens or closes it. (Ask for this outfit as S.G.O.I.).

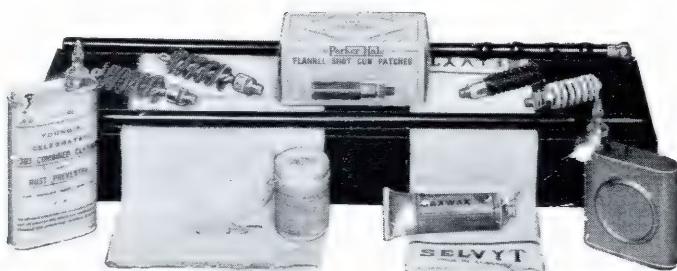

LIGHTWEIGHT STEEL, CELLULOID COVERED SHOTGUN CLEANING ROD

with improved joint

Two-piece lightweight steel rod, covered black ribbed celluloid. Super strong joint of unique construction ensures absolute rigidity when assembled. No metal fittings come into contact with bore of gun. The handle is bulged, as shown, affording a firm, non-slipping hold.

These rods are suitable for 12, 16, or 20 gauge guns when used with correct size jag or other implement. The jag shown in the illustration is NOT supplied with the rod.

De Luxe Cleaning & Polishing Outfit

Contains all the items included in the Standard Outfit with the addition of the following :

"Aquoil" (an emulsion of Young's ".303" and water) in "Valvespout" container, "Motty" Paste for lead removal, leather bore polisher, tin of wax for polishing woodwork and leather, a "Cleneveet" cloth and a "Selvyt" polishing cloth.

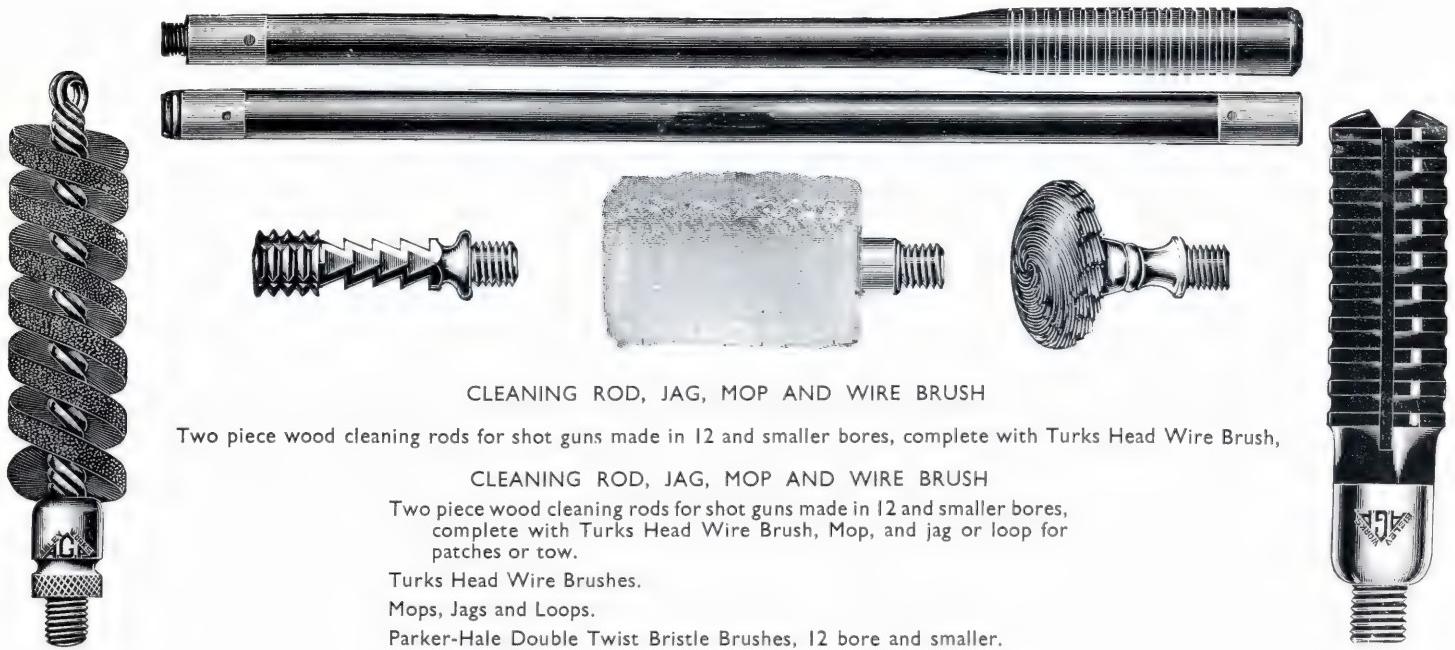

This outfit is designed to provide everything necessary to the cleaning and preservation of a shotgun, lock, stock and barrel. We do not provide lubricating oil, since any good light lubricating oil is usually available in most households. (Ask for this outfit as S.G.O.2).

Parker's Flannel Shot Gun Patches

These patches are suitable for 12, 16 and 20-bore Guns when used on one of the several sizes of Parker-Hale Jags. They are most economical and can be used over and over again if washed in paraffin when foul.

CLEANING IMPLEMENTS for SHOT GUNS

CLEANING ROD, JAG, MOP AND WIRE BRUSH

Two piece wood cleaning rods for shot guns made in 12 and smaller bores, complete with Turks Head Wire Brush,

FLEXIBLE BRASS JAG

WOOL MOPS

.22 to .303, .350 to .600

BRISTLE OR WIRE PULLTHROUGHS

In various bores and qualities.

GUN & RIFLE OILS

Young's .303 Cleaner and Rust Preventer, is an alkaline compound with great acid and rust preventing qualities, and we can thoroughly recommend it. It can be supplied in bottles, in Parker-Hale Valve-spout tins of 3 or 5 oz., or in tins of larger sizes. Prices as per list.

Parker-Hale Valve Spout Containers, with patent cap which cannot be detached and get lost, normally made to hold 3 or 4 ozs.

Rangoon Oil, in tins and bottles, in various sizes.

Three-in-One Oil, very suitable for the finest mechanism and also suitable for general gun cleaning and stock polishing, in bottles.

Rifleine Jelly. For preserving Arms from Rust, in tubes or in tins of one pound.

Flannelette Patches, for rifle cleaning, in packets. For .22 rifles, for .303 rifles and larger.

Rolls of Flannelette, small, large.

Tow. Good quality for gun or rifle cleaning, in $\frac{1}{2}$ lb. hanks.

Motty Paste, for removing Nickelling, per pot.

SUNDRIES

Snap Caps, 12, 16 and 20 bore, best quality, per pair.

do. for rifles, price on application.

Turnscrews, best quality, price on application.

Rubber Recoil Pads, slip on.

Rubber Recoil Pads for guns and rifles (these need fitting by a skilled man), including fitting.

CLAY PIGEON TRAPS

The I C I Plus Trap, throws Single or Double Birds at the will of the operator, simple and sturdy, with working parts protected from the weather.

The I C I Minor Trap, simple and of light design, throws Single Birds, easily adjustable for angles and elevation.

Eley Clay Pigeons, specially packed to prevent damage in transit. In crates of 175.

DECoy PIGEONS

The Max Baker Decoy. The Improved Pigeon Decoy.

Both the above decoys are light in weight and pack into a small space ; the Improved Decoy cannot be blown round on its peg or blown off its peg in a strong wind.

AMMUNITION

The metallic ammunition position is very difficult, stocks were exhausted at the end of the war and despite all their efforts the manufacturers are finding it most difficult to build up stocks, consequently there may be certain delays in the supply of cartridges listed on this page. Prices are given on a separate sheet and are subject to alteration without notice ; it should be noted that metallic ammunition is not subject to Purchase Tax.

JEFFERY'S SHOT GUN CARTRIDGES

W. J. Jeffery & Co. Ltd. load every year a large quantity of cartridges for Game and Wildfowl Shooting ; full details of these cartridges will be found in our special cartridge list. All cartridges are loaded specially to our customers' individual requirements ; prices are as those charged for the corresponding grade of Factory loaded cartridges. Our most popular cartridges are as those shown below.

Jeffery's CHAMPION quality

- 12 bore, 2½", 2¾" or 3" case.
16 bore, 2½" or 2¾" case.
20 bore, 2½" or 2¾" case.
Best quality metal lined gas-tight wet resisting cases.

Jeffery's SHARPSHOOTER

- 12, 16 and 20 bore, 2½" case only.
A very reliable and well known cartridge, carefully loaded with best quality powders.

Shot gun cartridges sold in England are subject to Purchase Tax but can be exported free of tax.

LICENCES AND FIREARMS CERTIFICATES

The following notes are written to give an idea of the procedure necessary in the United Kingdom concerning the purchasing of firearms, and more detailed information can be given on application

THE FIREARMS ACT

This Act does not apply to the possession of Shot Guns with barrels of over 20 in. in length, Shot Gun Cartridges, Air Rifles and Air Pistols, providing the purchaser is over the age of 17 years ; if the prospective user is under 17 years of age the weapon must be purchased by a parent or guardian.

The Act does apply to Rifles, Pistols, Revolvers and Smooth Bore Weapons with barrels of 20 in. and under in length and to Ammunition for such weapons.

Any person who wishes to use, possess or purchase, weapons or ammunition to which the Act applies must apply to the local Police Station for a Firearms Certificate, and before any Firearms or Ammunition may change owners the Certificate must be produced ; this also applies to firearms that have been repaired or let on hire.

GUN AND GAME LICENCES (UNITED KINGDOM)

Every person (with certain exceptions) who uses or carries Firearms, otherwise than within a dwelling house or the curtilage thereof, must take out a Gun or a Game Licence ; these Licences and full particulars concerning them can be obtained from the local Post Offices.

EXPORT LICENCES

An Export Licence is necessary for the weapons coming under the Firearms Act and also their ammunition ; sportsmen leaving the country can take with them either one or two smooth bore shot guns without an Export Licence as their personal baggage.

IMPORT LICENCES

The importation of weapons coming under the Firearms Act is also subject to restrictions, unless the owner is in possession of a British Firearms Certificate ; the simplest way is for the owner of the weapons to ask his gun-maker to deal with the importation. W. J. Jeffery & Co. Ltd. are only too pleased to help their customers regarding the Importation or Exportation of their weapons.

FORWARDING OF WEAPONS ORDERED

For weapons ordered for use in the United Kingdom, the simplest way is to have the goods forwarded by parcel post ; guns can be packed in a strong cardboard box and sent by registered post for approximately 5/-. If a gun is ordered complete in a case, the weight may be over the parcel post limit and the goods have then to be sent Passenger Train at Company's risk.

The dispatch of goods ordered from abroad is more complicated. If there is no ammunition in the consignment, the cheapest way is to send by registered parcel post, but in certain countries such as India, the importation of firearms by parcel post is not allowed ; goods urgently wanted can in many instances be sent by air, also ammunition, but some countries will only allow importation of arms and ammunition by sea freight.

All packing and forwarding charges are at cost price, and W. J. Jeffery & Co. Ltd. can be relied upon to see that goods are forwarded by the quickest and cheapest possible route.
